■ Business Overview

Design, Development and Manufacturing of Aircraft Passenger Seats
As Toyota Boshoku is aiming to “offer QUALITY OF TIME AND SPACE in all mobility.” and applying techniques refined in the production of automobile seats, Toyota Boshoku has developed high quality aircraft seats that offer exceptional comfort, reliability and function.

■ Products • Materials • Part Sizes • Facilities & Equipment

Our T1 Series of Economy Class Seats that offer exceptional comfort, reliability and function. After evaluation of our achievements so far, Product Offerability was granted by Boeing to our T1 Series for Boeing 787 platforms in August 2021. As a result, we are now able to offer our products to airline companies throughout the world.

■ Our Strength

For Comfort

We have been investigating how to make passengers feel comfortable and provide full support for hips and pelvis by a unique seat frame profile. This also contributes to disperse body pressure from seating position. As a result, our seat can make passengers have a comfortable time even for a long flight.

For Reliability

We marked a remarkable quality performance of the maintenance for seats delivered to our first customer. This achievement was highly evaluated and we received a letter of appreciation for reducing the customer's maintenance cost.

For Usability

The positions and shapes of features such as Meal Table, Armrest and Monitor are set to be comfortable for all passengers considered various physiques. Additionally, some of the design knowledge from automotive seating is incorporated into our design, for instance, the Table Latch and Cup Holder.

■ Needs we can correspond / Business partners we want

In addition to our seats in service with Boeing airplanes, Toyota Boshoku can offer our seats for other civil aviation aircraft.

■ Office & Plants

Development Site: Sanage Technical Center (Toyota, Aichi, Japan)
Production Site: Toyohashi-Higashi Plant (Toyohashi, Aichi, Japan)
